

## multiline

### Fast package coding

Precise and fast: The Multiline Piezo Inkjet Coder codes packages on two sides with a maximum of 4 writing heads per system at speeds up to 200 meters per minute. Mainly solvent-free inks adhere to porous and less absorbent surfaces.

The print quality is consistently high even at high production speeds. Depending on the print head type, up to 5 lines of text can be realised with Multiline in font sizes from 2 to 49 mm. Additional character sets such as barcodes, logos, icons, quality labels, warning notices etc. can be integrated into the texts without difficulty.

The system controls are neatly laid out and convenient: an illuminated display with large membrane keyboard is provided for data entry. A further highlight: as an option we can supply a Windows®-based PC program which is ideally suitable for formatting texts and graphics as well as networking and controlling up to 99 Multiline control devices.
